

First time detection of the vaccine spike protein and spike protein damage to organs in a person who died after covid19 vaccination – Important Information for all Pathologists and all autopsies of dead vaccinated people

The suspicion that the spike protein formed in the body as a result of the "vaccination" against Covid-19 could be responsible for the pathologically observed inflammations and lesions of vessels has now been confirmed immunohistologically for the first time.

The pathologists Prof. Dr. Arne Burkhardt and Prof. Dr. Walter Lang and their team in Germany have succeeded in reliably detecting the vaccine spike protein in the vessels of a person who died 4 months after "vaccination" and who had vascular lesions and also vaccine-induced myocarditis. Detection was successful using an antibody specific for the spike protein by conventional immunohistochemistry on the tissue sections.

The described detection method can be applied to all organ and cell damage in which conspicuous pathological findings are found after "vaccination" against Covid-19. From this follows: For ethical, legal and scientific reasons, all histopathological examinations in connection with damage due to "vaccination" against Covid-19 must be accompanied with this method with immediate effect.

Pathologists demonstrate what to look for in dead vaccinated people and where to find it - <https://pathologie-konferenz.de/en> . This is extremely important for determining the cause of death.

More autopsies carried out in Germany by Dr. Peter Schirmacher, the Chief Pathologist at the University of Heidelberg

<https://dailysceptic.org/2022/05/31/fears-of-cover-up-as-pathologist-who-said-30-40-of-post-vaccine-autopsies-died-of-the-vaccine-went-oddly-silent-and-suddenly-stopped-carrying-out-autopsies/>

The long, thick and fibrous blood clots identified in the section above can also be identified in Autopsies by Coroners, Pathologists and Embalmers.

The German Pathology findings relating to spike proteins above and the blood clot findings should be standard practise in all Autopsies of dead covid19 vaccinated people.
